PRODUCT OVERVIEW

The receivers allow you to monitor up to 4 different STI wireless alert devices at a single, convenient location. Supervised for low battery and signal reception, they have an audible chime tone or 12 VDC output for siren. The 4-Channel Voice Receiver sounds a tune or a prerecorded programmable voice message. Offers ten tones/tunes or 53 selectable words (English or Spanish) to create a custom message up to four words. Devices can be latching or momentary by zone. STI offers multiple wireless products designed to alert you of several different conditions (such as: an open garage door, mail delivered, a car in the driveway, open exit door, removed fire extinguisher or activated push button, etc.).

HOW IT WORKS

The receivers (excludes Single Channel Slave) supervise transmitter battery and signal reception (low battery is indicated with a short beep between 12 and 24 hours of detection).
